

Abdur Rahim Sujon

BSc Computer Science Candidate

✉ abdur.sujon.dev@gmail.com | 🏠 Portfolio: sujons.com | 🐙 Github | 💼 LinkedIn

Summary

Computer science student specializing in software and web development, with growing knowledge in AI and data mining, driven to contribute to the advancement of emerging technologies. Skilled in leveraging AI-assisted tools such as Claude Code, Gemini Code Assist, and Cline to streamline coding, testing, and debugging, ensuring efficient delivery of software products in agile environments. Developing a full-stack, data-driven website for a university module and leading a team of five peers to produce a client-focused software application through the Salford Hack Camp group project. Previously led a team of ten members in prior employment and currently working as a team member at Tortilla. Combining transferable skills gained through years of work experience with a passion for solving complex technical challenges, capable of delivering impactful results in a professional software development environment.

Education

University of Salford Manchester

BSc (Hons) Computer Science with Professional Experience (2024 – 2028)

Expected Grade: First

Year 1 – Average: 80.17%

- **Web Development & HCI (84%)** – Published a responsive front-end project utilizing Bootstrap, JavaScript, CSS, and HTML. Researched human-computer interaction principles and developed a clone GP application utilizing .NET/C#.
- **Computer System Internal & Linux (88%)** – Enhanced knowledge in computer system fundamentals, with hands-on experience in Linux and virtualization tools.
- **Database System (90%)** – Acquired a deep understanding of SQL and its integration in system development.
- **Programming 1 (74%)** – Gained proficiency in OOP, Java syntax, and data structures, and debugging.
- **Programming 2 (77%)** – Deployed a console-based vehicle hire system demonstrating advanced understanding of Java.

Year 2 – (Current)

- **Software Project with Agile Techniques:** Leading a group of five members to create a software solution utilizing the SCRUM method according to requirements from a real client.
- **Data Structures and Algorithms:** Gaining a strong grasp of data structures and how data plays a key role in algorithm optimization.
- **Client Server System** – Developing a full-stack web application using PHP, MySQL, and JavaScript.
- **Design Pattern** – Applying object-oriented design principles with Java and JavaFX to build desktop software solutions.
- **Network and Security:** Learning how to develop secure software by implementing network and security principles.

Technical Skills

Programming Language	Java, PHP, JavaScript, C#
Software Development	Java, JavaFX, C#, .NET
Front-End Web Development	JavaScript, HTML5, CSS, Bootstrap, Web Design, Photoshop, Figma
Back-End Web Development	PHP, SQL, SQLite, MySQL
DevOps / Tools	Linux, Windows, Git, GitHub, Gitlab

Projects

Sputnik Vehicle Hire

Java

- Developed a console-based system to read and manage customer and vehicle data from text files.
- Enabled adding new customers and vehicles to the data file for dynamic updates.
- Implemented vehicle subcategories, allowing rentals of cars, vans, and trucks.
- Designed a reservation module to check for data conflicts and prevent overlapping bookings.
- Project File: github.com/abdursujon/sputnik-vehicle-hire

Emilia's Della Roma

JavaScript, PHP, PHPMailer, HTML5, CSS, Bootstrap, postcode.io

- Developed a responsive, mobile-first website allowing users to search for nearby Emilia's locations.
- Enabled table reservations, newsletter subscriptions, and enquiry form submissions.
- Implemented automated email confirmations for customer bookings.
- Optimized mobile-first UX and accessibility for users making restaurant bookings via mobile devices.
- Project Link: emilias-della-roma.netlify.app

Star Calculator

JavaScript, CSS, HTML5

- Developed an Apple-style calculator capable of performing all standard mathematical operations.
- Implemented theme customization, allowing users to switch between different colours of their choice.
- Added dynamic font size adjustment, enabling users to personalize the display for better readability.
- Project Link: star-calculator.netlify.app

North Trafford GP Clone

C#, .NET

- Conducted research on Human-Computer Interaction to make the system accessible for everyone.
- Enabled users to check in and search for a specific department location by entering the department name.
- Created a bilingual system to allow Welsh speakers to switch the language settings to Welsh.
- Project File: github.com/abdursujon/North-Trafford-Group-Practice-Clone

Personal Portfolio Website

JavaScript, HTML5, CSS, Bootstrap

- Developed a personal portfolio showcasing skills, projects, and contact pages.
- Implemented dynamic greeting functionality that changes based on the time of day.
- Enabled visitors to explore additional projects through a dedicated project page and linked Windows-based software projects on GitHub.
- Portfolio Link: sujons.com

Work Experience

Team Member, Tortilla Manchester

Manchester, UK

50 Oxford St, Manchester, M1 5EJ

Mar. 2024 - Present

- Provide excellent customer service as part of a team in a busy restaurant, serving 500+ customers during lunch and dinner rushes.
- Recognised for punctuality and reliability, including assisting colleagues by covering shifts and proactively managing urgent tasks.
- Awarded skills competency assessment and progress review certificate from the company.
- Keep workspace clean and organised to optimise workflow, frequently praised for it.

Team Leader, Subway

Chelmsford, UK

11 Bishop Hall Ln, Chelmsford, CM1 1SH

Sept. 2022 - Feb. 2024

- Led and supervised a team of 10, achieving exceptional customer service standards and team performance.
- Trained and mentored new employees, enabling rapid learning and engagement.
- Collaborated with management to handle inventory and place supply orders.
- Earned University of Subway, Food Safety, and Sandwich Artist certificates.
