Profile

Second year computer science major specialising in software engineering and AI, building data-driven, scalable systems. Skilled in full-stack development and acting as Scrum Master and Software Engineer at the University of Salford Hack Camp to deliver an application for BCS Manchester. Previously led a team of ten in Subway, and currently working part-time as team member at Tortilla Manchester.

Education

University of Salford Manchester

BSc Computer Science with Professional Experience

Expected Grade: First

Year 1 Average: 80.17%

Key Modules:

- Software Project with Agile Techniques (Scrum Master leading a team of seven)
- Data Structures and Algorithms
- Client Server System (full-stack web application)
- Design Patterns (OOP, JavaFX)
- Network and Security

Work Experience

Scrum Master & Software Engineer, University of Salford (Present)

(Client - BCS Manchester)

- Leading a seven-member team at University of Salford Hack Camp and delivering a software for BCS Manchester that helps students secure year-in-industry placements.
- Designing and implementing core features using OOP best practices, secure coding standards, and SFIA v8-based algorithm-based skills matching.
- Working with cross-functional partners to refine requirements, improve UX, and maintain scalable architecture.
- Building automated edge-case tests and secure client-server workflows, including CV upload with AI-based image verification.

Team Member, Tortilla Manchester (Mar. 2024 - Present)

- Provide excellent customer service as part of a team in a busy restaurant, serving 500+ customers during lunch and dinner rushes.
- Recognised for punctuality and reliability, including assisting colleagues by covering shifts and proactively managing urgent tasks.
- Awarded skills competency assessment and progress review certificate from the company.
- Keep workspace clean and organised to optimise workflow, frequently praised for it.

Team Leader, Subway (Sept. 2022 - Feb. 2024)

- Led and supervised a team of 10, achieving exceptional customer service standards.
- Trained and mentored new employees, enabling rapid learning and engagement.
- Collaborated with management to handle inventory and place supply orders.

Selected Projects

All projects can be viewed at sujons.com

FindAPlacement.bcs.org

Scrum Master & Software Engineer

Leading sprints and developing a scalable placement-matching platform for BCS Manchester. The system automatically matches students with employers using SFIA v8 skills data. Includes role-based dashboards, placement listings, article section, automated matching logic, and full authentication (login and registration).

PetWatch

Full-stack MVC app to help pet owners find their lost pets. Users can report lost pets, and owners can do CRUD operations. Also featuring secure authentication, search, filters, and OOP best practices.

Sputnik Vehicle Hire

Java console-based system for managing CSV-based rentals, customer data, vehicle categories, and conflict-free reservations.

Personal Portfolio Website

Responsive portfolio showcasing skills, projects, and contact information.
